

Loops:

↳ iterative action.

→ iterable object

↓
s. tuple, list, set, array, dict
string.

python -> indexes start at '0'.

list(range(1, 16, step size))

(16, 1, -1)

↓
reverse.

range(len(numbers)+1)

↓
dynamic
length calculator.

↓
to include the last
number.

→ while loop → we don't know the number of
times of iterate.??

break at a specific condition.

We know how many times to loop ??

but no iterable

break → →

for val in "string":

if val == "i":

break → execution.
print(val)

for val

if value

continue → still continues.
print(val). executing the
loop

5 → for loop

5 → while question
